NOTES

▼ index.html 10

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <meta charset="utf-8">
5   <meta name="viewport" content="width=device-width,initial-scale=1">
```

AWESOME

Well done! `viewport` `<meta>` tag is provided to control mobile layout!

```
6   <title>Wenzhe's portfolio</title>
7   <link rel="stylesheet" href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css">
8   <link rel="stylesheet" href="css/portfolio.css">
9 </head>
10 <body>
11   <header>
12     <div class="container">
13       <div class="row">
14         <div class="col-sm-2 logo">
15           
```

REQUIRED

Please also make the logo image responsive by adding `img-responsive` class for this element

```
16           </div>
17         <div class="col-sm-10 site-name right">
18           <h1>WENZHE XU</h1>
19           <h2>FRONT-END PORTFOLIO</h2>
20         </div>
21       </div>
22     </div>
23   </header>
24   <hr>
```

REQUIRED

It is a requirement by Bootstrap framework that all elements on the page must be housed inside a grid layout system. Please provide `.container` or `.container-fluid`, `.row` and a column to wrap around this element.

Resources

```
25
26 <div>
```

REQUIRED

Design rubric requires all `<div>` and `<section>` tags to be provided with CSS `class` (es). Please make sure this requirement is met. If the element is redundant, you can also consider deleting it.

27 ``

REQUIRED

It is a requirement by Bootstrap framework that all elements on the page must be housed inside a grid layout system. Please provide `.container` or `.container-fluid`, `.row` and a column to wrap around this element.

30

`<div class="container">`

SUGGESTION

Instead of duplicating Bootstrap container elements, we should wrap all `row` s that have the same container in a general `.container` or `.container-fluid` element, eg:

```
<div class="container-fluid">
  <nav class="example-nav">

    </nav>
</div> <!-- /.container-fluid -->

<div class="container">
  <header class="row">
    <div class="col-md-4 col-xs-12">
      <!-- content -->
    </div>

    <div class="col-md-4 col-xs-12">
      <!-- content -->
    </div>
  </header> <!-- /.row -->

  <main class="row">
    <div class="col-xs-12">
      <!-- content -->
    </div>
  </main> <!-- /.row -->
</div> <!-- /.container -->
```

31

32 `<div class="row">`
 33 `<div class="col-sm-4">`
 34 ``

AWESOME

Tip

You can use `srcset` to tell browser to download the most optimized image size for different device / screen size. When using `srcset`, we need to also use `sizes` to truly optimize the requests.

<p class="project-name"><a href="https://github.com/xuwenzhe/build-a-portfolio-site">Portfolio</a></p>
```

AWESOME

Tip ⚡

This link is pointing to an external website.

In this case, it's a good practice to instruct browser to **open link in a new tab** rather than redirect user to the link on the same browser tab, which should be avoided because we're redirecting user away from our site.

To open link in a new tab, please add `target` attribute and give it a `_blank` value. Ex:

```
<a href="http://www.udacity.com/" target="_blank">Udacity</a>
```

35

```
<p class="project-url">https://github.com/xuwenzhe/build-a-portfolio-site</p>
```

36

```
</div>
```

37

```
<div class="col-sm-4">
```

38

```

```

39

```
<p class="project-name"><a href="https://github.com/xuwenzhe/leetcode">Leetcode</a></p>
```

40

```
<p class="project-url">https://github.com/xuwenzhe/leetcode</p>
```

41

```
</div>
```

42

```
<div class="col-sm-4">
```

43

```

```

AWESOME

Nice job with `alt` values for images! 🌟💥 As it is important to provide this to make the image "readable" by machine. Things like search engine, screen reader, etc. do use `alt` value to "read" the image "content"

44

```
<p class="project-name"><a href="https://github.com/xuwenzhe/selfnotes">Selfnotes</a></p>
```

45

```
<p class="project-url">https://github.com/xuwenzhe/selfnotes</p>
```

46

```
</div>
```

47

```
</div>
```

48

```
</div>
```

49

```
</div>
```

50
